

Device as a Service

A circular **subscription model** for all your company devices

Foxway Device as a Service (DaaS) provides a unique circular subscription model in which you can **choose both new and premium refurbished devices** from world-leading brands.

Achieve your business needs with a **flexible, cost-efficient, and sustainable solution for all your tech devices.**

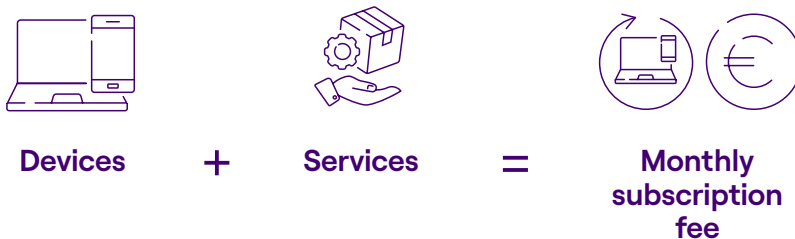

Key benefits:

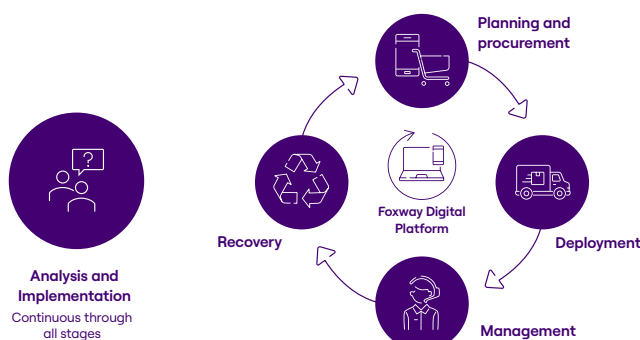

- **Sustainability through circularity and reduced environmental impact:** Enabling circular tech in a measurable way by prolonging device lifetime and decreasing the carbon footprint.
- **Flexibility:** Scale up or down depending on your business needs.
- **Simplicity:** All information in one place, through one digital platform and one partner. Complete overview of your devices.
- **Cost efficiency and financial control:** Full financial control and predictable cost structure with a monthly subscription fee.
- **Security:** Individual control of each device to avoid unmanaged devices. Data from each unit will be erased in a secure way.

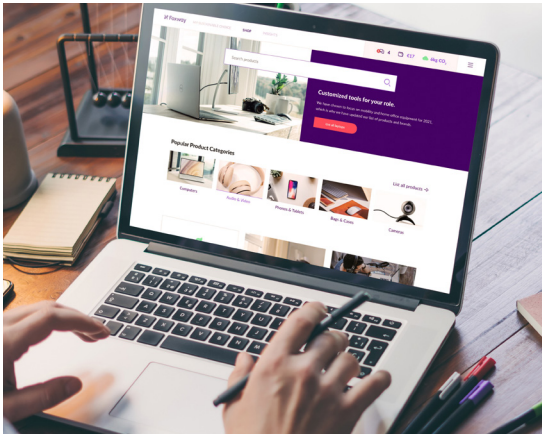

A complete solution:

Devices and services with a monthly subscription fee per device.

Foxway Device as a Service captures the whole lifecycle – from analysis and procurement to the recovery of devices.

Foxway Digital Platform

Foxway Digital Platform – where all the processes of the lifecycle are handled. Choose between using the Foxway portal or integration into you own platform and processes.

Enable sustainability through circularity:

CSRD (Corporate Sustainability Reporting Directive) requires certain information that was previously voluntary and therefore ensures that ESG information is available to investors and stakeholders. By raising the quality requirements for sustainability reporting to the same level as financial reporting, and requiring external reviews, the risks of green- or social washing are reduced.

Moving from a traditional purchasing model to a circular lifecycle solution like Device as a Service will have a significant impact on your company's ESG goals. When you start enabling sustainable technology, your devices can circulate, ensuring reuse in multiple lifecycles. Including premium refurbished devices, with industry leading warranty, in the solution will also highly reduce Scope 3 CO2 emissions.

With Foxway Device as a Service, customers can get data and insights from the company's computers, and their carbon footprint during the production process. Foxway can manage the entire lifecycle of the device within a company and, through its processes, offers customers data on the carbon footprint of the purchase and return.

85–90%
of a smartphone carbon footprint comes from the production stage

Belkhir, L.; Elmeligi, A. (2018). Assessing ICT global emissions footprint: Trends to 2040 & recommendations. In: Journal of Cleaner Production, v177, p.448-463

By contributing to a circular model you will save an average of

280 kg CO₂ per device*
