

# Device as a Service

A circular **subscription model** for all your company devices

Foxway is an international Device as a Service (DaaS) provider with a unique circular business model.

With Foxway's Device as a Service (DaaS), you get to choose between devices from world-leading brands combined with our efficient services – all as a circular subscription model.

## Key benefits:

- **Sustainability through circularity:** Enabling circular tech in a measurable way by prolonging device's lifetime and decreasing the carbon footprint.
- **Flexibility:** Scale up or down dependent on your business needs.
- **Simplicity:** All information in one place, through one digital platform and one partner. Full overview of your devices.
- **Cost efficiency and financial control:** Full financial control and predictable cost structure with a monthly subscription fee.
- **Security and audit trail:** A centralized process and a secure administration with individual control of each device.

## A complete solution:

Devices and services with a monthly subscription fee per device.

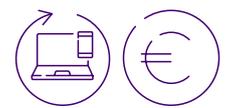

Devices

Monthly  
subscription  
fee

Foxway Device as a Service (DaaS) captures the whole lifecycle – from analysis to recovery of devices.

## Enable sustainability through circularity:

The new CSRD (Corporate Sustainability Reporting Directive) requirements will make some information that was previously voluntary to disclose compulsory, so that relevant ESG information is readily available for investors and stakeholders. Raising the requirements for sustainability reporting to the same level as financial reporting and requiring a third-party review mitigates the risks of social- or green-washing and busts companies' ESG engagement. Companies currently subject to NFRD (Non Financial Reporting Directive) will have to begin reporting in 2025 (for the financial year 2024), with others to follow in the years ahead.

Moving from a traditional purchasing model to a circular lifecycle solution such as Device as a Service can have a significant impact on the environment. By embracing sustainable technology practices, you contribute in a meaningful way to a more circular economy by facilitating the refurbishment, upgrade and reuse of devices, thereby extending their lifespan and avoiding the production of new devices.

With Foxway Device as a Service, customers can get data and insights into the company's computers and their carbon footprint during the production process. Foxway manages the entire lifecycle of the device within the company and, through its processes, can offer customers data on the carbon footprint of purchase and return.

**85-95%**  
of the carbon footprint  
from a smartphone comes  
from the production stage

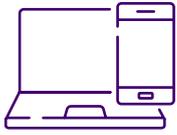

Belkhir,L.; Elmeligi, A. (2018). Assessing ICT global emissions footprint: Trends to 2040 & recommendations. In: Journal of Cleaner Production, v.177, p.448-463

By contributing to a circular model you  
will save an average of

**280 kg CO<sub>2</sub> per Laptop\***

# Foxway Device as a Service (Daas) for Enterprise

## Devices

Your selection of devices

## Core services

Services that are always included
