

Ängsdals Schools

creating better learning through the
right technology

The Challenge

For many years, Ängsdal Schools had invested in Mac and iPad as a natural part of everyday teaching and learning. At the same time, the school recognized that its underlying infrastructure needed to be modernized to fully support the Apple ecosystem and provide the best possible experience for both educators and IT.

The goal was to reduce administrative workload, simplify device management, and establish a robust foundation where technology could seamlessly support teaching. Once the technical platform was in place, the school also wanted to ensure that teachers could fully leverage Apple's educational tools in the classroom.

The Solution

Together with Foxway, Ängsdal Schools embarked on a long-term transformation journey where technology and pedagogy evolved side by side.

A Modern Apple Infrastructure

The first step was to modernize the school's Apple environment by creating a secure, scalable, and future-ready platform.

Foxway implemented:

- **Apple School Manager**
- **Jamf School**
- **Automated device enrollment and deployment**
- **Improved identity management**
- **Efficient, centralized administration of the school's Apple devices**

The new infrastructure delivered a seamless user experience for students, teachers, and IT while establishing the foundation for a more efficient and sustainable way of working.

Pedagogical Development

With the technical foundation in place, the focus shifted to teaching and learning.

Foxway delivered professional development sessions centered on Apple Classroom, equipping teachers with practical strategies to:

- **Create structure and maintain focus during lessons**
- **Reduce distractions in the classroom**
- **Make more effective use of Apple devices to support learning**

The training was complemented by customized educational resources, making it easy for teachers to apply their new knowledge in everyday classroom practice.

The Results

By combining a modern Apple infrastructure with professional development, Ängsdal Schools has created a digital learning environment where technology and pedagogy reinforce one another.

Today, the school benefits from:

- **A stable and future-ready Apple platform**
- **Simpler and more efficient device management**
- **Reduced administrative workload for IT**
- **Greater adoption of Apple's educational tools in the classroom**
- **Better conditions for teachers to create structured, focused, and engaging learning environments**
- **A scalable platform that supports the school's ongoing digital transformation**

Foxway's Contribution

Foxway combined strategic consulting with hands-on implementation, bringing together deep technical expertise in the Apple ecosystem with educational development.

The engagement included:

- **Designing and implementing a modern Apple infrastructure**
- **Advisory services for Apple School Manager, Jamf School, deployment, and identity management**
- **Professional development for teachers**
- **Development of customized training materials**
- **Long-term support for the school's continued digital transformation**

By working closely with school leadership, IT, and educators, Foxway ensured that technology became a natural enabler of teaching and learning while creating the foundation for more effective educational outcomes.

With Apple School Manager, Apple Classroom, and the seamless integration between Mac, iPad, and the school's administrative systems, IT was able to automate and simplify device management while teachers gained powerful tools to create more structured, engaging, and effective learning experiences.

Customer Value

Today, Ängsdal Schools has a modern, sustainable Apple environment where technology and pedagogy work together to support learning. Through its partnership with Foxway and Apple, the school has established a solution that simplifies day-to-day operations, empowers teachers, and provides a strong foundation for continued innovation and the future of education.
